Case study

Learning Management System

Business Requirement: Client, an education institution popular in offline educational services has decided to harness the functionality of advanced technology and add a learning management system to facilitate online educational services. Client was looking for an offshore partner who can develop the application with robust features and excellent UI at a cost effective manner.

Our Solution: We have developed the online educational solution on ASP.Net Technology. It is a Learning Management System with features such as sharing and accessing rich contents such as audio, video, images via online, access to e-books within the curriculum. Issuing materials for offline use. The student activities and performance, assignment submission and evaluation etc. are some of the core features of the product. Students can create their profile and can study different courses at a time.

About Client

Industry: Education

Location: Texas, USA.

Technologies: ASP .NET, HTML5, JQuery, Bootstrap, WCF Service, SQL Server.

Business Impact: The application implemented successfully. We are now building new features for the application to update the application soon. The application has increased their educational service levels.
